

Isaac Mubiru

isaacmubiru99@gmail.com | linkedin.com/in/isaac-mubiru | github.com/zac-09 | Kampala, Uganda (EAT, UTC+3 — overlaps GST)

PROFESSIONAL SUMMARY

Senior Node.js / TypeScript backend engineer with 6+ years building scalable microservices, high-throughput APIs, and blockchain integrations. Architected a Kafka + gRPC + NATS Streaming microservices backend on Docker and Kubernetes at CodeBits. Led the zero-downtime migration of 20+ production apps at MTailor with an idempotent Pub/Sub pipeline, cutting \$5K/month. Built DeFi backends with Web3.js + Node.js at Mind2matter. Remote-first across US, SG, EU teams — native timezone overlap with GST.

CORE COMPETENCIES

Node.js / TypeScript

Microservices

Nest.js-style patterns

Kafka / gRPC

High-performance APIs

Blockchain / Web3

Monitoring / SLA

Kubernetes / Docker

WORK EXPERIENCE

MTailor Sep 2022 – Present

Software Engineer — US Remote

- Led end-to-end migration of 20+ applications from Parse/MongoDB to Firebase/GCP with zero downtime, reporting directly to the CTO.
- Designed idempotent Pub/Sub pipeline for two-way MongoDB ↔ Firestore sync — monitored lag, alerting, and rollback across live production traffic.
- Migrated file storage from S3 to GCS via Python script with checksums.
- Cut \$5,000/month by migrating services off AWS.

CodeBits Jan 2020 – Jul 2021

Software Engineer — Uganda Remote (Led team of 4)

- Architected Node.js microservices backend: Kafka events, gRPC contracts, NATS Streaming, Docker, Kubernetes — consumed by mobile, web, and USSD clients.
- Built a USSD service bridging to the backend over gRPC — high-throughput, low-latency.
- Built React Native + Expo mobile apps for LASPNET with Firebase push notifications.

Mind2matter.co Jan 2022 – Jul 2022

Software Engineer — US Remote (Agency)

- Built DeFi backends with Web3.js + Node.js — EVM integration, ABI-to-client, on-chain event handling.
- Delivered React UIs from Figma under tight agency deadlines.

Dr Wealth Aug 2021 – Jan 2022

Software Engineer — Singapore Remote

- Extended backend APIs with Firebase Cloud Functions + Express.js — surface for a real-time PWA.
- Built ad-hoc jobs querying 2M+ Firestore records from Morningstar APIs.

MTailor (Contractor) Mar 2022 – Jul 2022

Contractor — US Remote

- Built Parse → Firebase migration script; authored SDK docs consumed by engineers and Ops.

PROJECTS

FIDA Uganda Microservices Backend (CodeBits)

Kafka + gRPC + NATS Streaming architecture; Docker + Kubernetes; consumed by mobile, web, USSD clients.

Node.js · Kafka · gRPC · NATS · Docker · Kubernetes

DeFi Backend Integrations (Mind2matter)

Web3.js + Node.js layer bridging EVM smart contracts to client apps.

Node.js · Web3.js · EVM · React

Parse → Firebase Migration (MTailor)

Pub/Sub-based sync pipeline migrating 20+ apps with zero downtime — monitored lag and rollback.

Node.js · Pub/Sub · Firestore · MongoDB · GCP

EDUCATION

B.Sc. Computer Engineering · [Makerere University](#)

Aug 2018 – Sep 2022

SKILLS

Proficient: Node.js, TypeScript, Firebase, GCP, MongoDB, SQL, Git, Linux, React, Python

Intermediate: Go, AWS, Rust, Kubernetes, Docker, Kafka, gRPC, Web3.js

Languages: English · Kiswahili
