PROFESSIONAL SUMMARY

Senior Node.js / TypeScript engineer with 6+ years shipping SDKs, APIs, and backend platforms that other engineers depend on. Led the zero-downtime migration of 20+ production apps at MTailor — designing reusable sync modules and Pub/Sub pipelines consumed across the engineering org, and cutting infrastructure cost significantly. At CodeBits, architected gRPC + Kafka microservices with client libraries used by mobile, web, and USSD apps. Comfort with developer experience, modular package design, and remote-first collaboration across US/SG/EU teams.

CORE COMPETENCIES

TypeScript SDK design

Node.js

API architecture

Developer experience

Modular packages

Distributed systems

gRPC / microservices

Web3 / blockchain

WORK EXPERIENCE

MTailor

Sep 2022 – Present

Software Engineer — US Remote

- Led end-to-end migration of 20+ applications from Parse/MongoDB to Firebase/GCP with zero downtime, reporting directly to the CTO — effectively shipping an internal SDK consumed by every app in the org.
- Designed reusable Node.js sync module (MongoDB ↔ Firestore) built on Google Pub/Sub — modular, extensible, and rolled out app-by-app.
- Shipped buyer-facing 3D visualization feature using ffmpeg video overlay; increased conversion.
- Migrated file storage from S3 to GCS via Python script with checksums and rollback path.
- Cut \$5,000/month by migrating services off AWS.

Mind2matter.co

Jan 2022 – Jul 2022

Software Engineer — US Remote (Agency)

- Built DeFi backends with Web3.js + Node.js — EVM-compatible protocol integration from smart-contract ABIs to client SDKs.
- Delivered React UIs from Figma under tight agency deadlines, reporting to the CTO.

Dr Wealth

Aug 2021 – Jan 2022

Software Engineer — Singapore Remote

- Extended backend APIs with Firebase Cloud Functions + Express.js hosted on Heroku — surface used by a real-time stock-price PWA.
- Built ad-hoc jobs querying 2M+ Firestore records to keep prices current from Morningstar APIs.
- Shipped responsive React + Tailwind pages.

CodeBits

Jan 2020 – Jul 2021

Software Engineer — Uganda Remote (Led team of 4)

- Architected a microservices backend for FIDA Uganda's case-management system: Kafka events, gRPC contracts, NATS Streaming, Docker, Kubernetes — consumed by mobile, web, and USSD clients.
- Built a cross-platform mobile app (React Native + Expo) for LASPNET with Firebase push notifications.
- Built a USSD service for legal aid providers, bridging to the Node.js backend over gRPC.

MTailor (Contractor)

Mar 2022 – Jul 2022

Contractor — US Remote

- Hired via Upwork for a complex backend migration from Parse/MongoDB to Firebase Firestore + GCP.
- Authored migration docs and training for engineers on new Firebase Node.js + Python SDKs.

PROJECTS

Parse → Firebase Migration SDK (MTailor)

Designed a reusable Node.js migration module with Pub/Sub-based dual-write — consumed by 20+ production apps with zero downtime.

Node.js · Firebase · Google Pub/Sub · GCP

FIDA Uganda Microservices Backend (CodeBits)

Kafka + gRPC + NATS Streaming architecture consumed by mobile, web, and USSD clients.

Node.js · Apache Kafka · gRPC · Docker · Kubernetes

DeFi Backend Integrations (Mind2matter)

Web3.js + Node.js integration layer bridging smart contracts to client applications.

Node.js · Web3.js · EVM · React

EDUCATION

B.Sc. Computer Engineering · [Makerere University](#)

Aug 2018 – Sep 2022

SKILLS

Proficient: Node.js, TypeScript, Firebase, GCP, React, Python, MongoDB, SQL, Git, Linux

Intermediate: Go, AWS, Rust, React Native, Kubernetes, Kafka

Languages: English · Kiswahili
